Job Application for Malware and Computer Forensics Analyst

Dear Ms. Bauer,

I hope this letter finds you well. My name is Dylan, and I'm a programmer at National Fuel, a gas company based in Buffalo, NY. Recently, I began searching for a new challenge, something more interesting than my current position and that is when I came across your posting for a malware and computer forensics analyst - 1667093. With my background in computer science and my ingenuity when problem solving, I would be a great addition to the team.

When I first graduated high school I considered joining the Air Force, but ended up pursuing my goals through a college degree. Having the opportunity to support our government in this role would be a dream come true. While pursuing my computer and information science degree, I received a minor in computer crime after taking many computer forensics and ethical hacking courses. Those were some of the most interesting classes I took and the skills I learned during those classes have set me up for a position like this one. Having experience analyzing hard drive images using FTK and even receiving my AccessData Certified Examiner certificate give me the opportunity to start contributing on day one. My included resume will reveal my prior work experience, detailing some of my history in information security. The exploding job market and reputation around being a developer led me to my current position as a programmer. My time at National Fuel has taught me a lot about all aspects of the software development life cycle, but has not intrigued me the way information security positions have.

I look forward to discussing the position further and learning more about the opportunities available at AT&T. If I can provide anything please let me know. I look forward to hearing from you. I can be reached at dylan.rumbold@gmail.com and 716-245-3101.

Thank you for your consideration.

Sincerely,

Dylan Rumbold
